

DOMINATE THE DARK

Harris F5032 Lightweight Night Vision Binocular

DARKNESS IS POWER. USE IT.

Complex low-light and no-light combat scenarios present unique challenges that today's night vision binocular specifications can't meet, leaving you vulnerable. Until now. The F5032 Lightweight Night Vision Binocular far exceeds these industry standards and gives special forces a decisive edge in the most uncertain conditions. There is great power in the darkness. Use it to your advantage with the F5032.

Demist Shield for use when eyepiece diopter attachments are not used

Dovetail Helmet Mount Interface

Internal "AA" Battery

Eyepiece Lenses with diopter attachments spanning the range of +2 to -2 diopters in 0.5 diopter increments

Sacrificial Filters
Protection for objective lenses

Harris F5032 Lightweight Night Vision Binocular

HARRIS[®] TECHNOLOGY TO CONNECT,
INFORM AND PROTECT[™]

DOMINATE THE DARK

LOW LIGHT / NO LIGHT CAN BE AN OBSTACLE – OR A STRATEGIC ADVANTAGE
THE WAY YOU SEE IT DEPENDS ON YOUR NIGHT VISION TECHNOLOGY

The Harris F5032 successfully deploys a full range of mission-critical features:

AR COATINGS

A top-performing anti-reflective coating protects all of the F5032's lenses. Each one is water repellent as well as dust, smudge, and scratch resistant.

VARIABLE GAIN

When it comes to image intensifier performance, you're in control. The F5032 is available with or without manual brightness adjustment – simply specify your preference.

NEXT-GEN ERGONOMICS

Designed with lower-profile optics and greater vertical adjustment capabilities, this lightweight night vision binocular provides a more efficient user experience.

RUGGED DESIGN

This binocular is built to withstand the rigors of conflict. Made with molded, state-of-the-art thermoplastic parts, it thrives in the harshest environments.

FLEXIBILITY IN COMBAT

With both monoculars flipped away and up, the system stows closely along the contour of your helmet, reducing silhouette and neck strain while minimizing the potential for system damage.

OPERATOR ALERTS

The F5032 has indicators for low battery (yellow) and IR light source (red). There is also an optional external battery pack for extended use that doubles as a counterweight.

CLOSE FOCUS

The F5032 offers a close-in minimum focus distance so you can perform crucial tasks with more clarity. Whether it's reading printed map details in light-sensitive areas, administering close medical support, repairing weapons on the move, or re-configuring a radio, this binocular gets you closer to your work while ensuring you maintain essential cover.

FIXED OR ADJUSTABLE DIOPTR

Achieve optimum individualized performance with the option of adjustable eyepieces and lenses designed to accommodate personal preference and mitigate eye strain.

IR ILLUMINATOR

Most binoculars require a separate IR illuminator for zero-light areas such as caves, buildings, and underground spaces. The F5032 is equipped with an integrated LED infrared illuminator to reduce equipment load and ensure you're ready to rule the dark in any situation.

HOT SWAPPABLE IMAGE INTENSIFIER MODULES

Repairing a binocular should not take away from your mission focus. The F5032 is strategically designed for quick replacement of image intensifier tubes, reducing maintenance time.

VERTICAL VIEWING ABILITY

The F5032 is designed to prevent inadvertent shut-off at inopportune times. Other binoculars can automatically turn off when the user tilts their head. This intuitive vertical viewing ability ensures your night vision is reliable, regardless of your orientation. The only time auto shut-off engages is when the binocular is stowed.
